

1.singleton

```
class Test
```

```
{
```

```
private static test s=null;
```

```
public string str;
```

```
private Test()
```

```
{
```

```
str="Singleton Class";
```

```
}
```

```
public static test getInstance()
```

```
{
```

```
if(s ==null)
```

```
{
```

```
s=null Test();
```

```
}
```

```
retrun s;
```

```
}
```

```
}
```

```
class Singleton
```

```
{
```

```
public static void main(String args[])
```

```
{
```

```
Test a= Test.getInstance();
```

```
Test b= Test.getInstance();
```

```
a.str=(a.str).toUpperCase();
```

```
System.out.println("String-a: "+a.str);
```

```
System.out.println("string-b: "+b.str);
```

```
System.out.println("Hence, proved.");
```

```
}
```

```
}
```

2.organization program

```
package oop2
```

```
public class Employee
```

```
{
```

```
int id,incentive,overtime;
```

```
String name;
```

```
double base_salary;
```

```
public Employee(int a,String b,double c){
```

```
this.idea;
```

```
this.name=b;
```

```
this.base_salary=a;
```

```
}
```

```
public void salary()
```

```
{
```

```
double sal=base_salary;
```

```
System.out.println("Base salary is;" +sal);
```

```
}
```

```
}
```

```
public class Manager extends Employee{
```

```
double c;
```

```
public Manager(int a,String b,double c){
```

```
super(a,b,c);
```

```
this.c=c;
```

```
}
```

```
public void salary_calc(int incentive)
```

```
{  
double sal=c+insentive;  
System.out.println("Manager's Salary is:"+sal);  
}  
}
```

```
public class Labor extends Employee{  
double c;  
public Labor(int a,String b,double c){  
super(a,b,c);  
this.c=c;  
}  
public void salary_calc(int overtime)  
{  
double sal=c+overtime;  
System.out.println("Labor's Salary is:"+sal);  
}  
}
```

```
public class Organization  
{  
public static void main(String args[])  
{  
Manager m = new Manager(123,"Glenn",50000):  
m.salary_calc(5000);  
Labor l=new Labor(134,"Abc",10000):  
l.salary_calc(300):  
}  
}
```

3.

```
package oop3
```

```
public class Bank {
```

```
    private String name = "Bank";
```

```
    int totalAmount;
```

```
    public void addToTotalBankCash(Bank obj) {
```

```
        totalAmount += obj.totalAmount;
```

```
    }
```

```
    public void showTotal() {
```

```
        System.out.println(" The total cash in " + name + " is " + totalAmount);
```

```
    }
```

```
    public void addAmt(int amt) {
```

```
        totalAmount += amt;
```

```
    }
```

```
}
```

```
public class CurrentAccount extends Bank {
```

```
    private String name = "Current Account";
```

```
    public void showtotal() {
```

```
        System.out.println("The Cash Credits of " + name + " is " + totalAmount);
```

```
    }
```

```
}
```

```
public class SavingsAccount extends Bank {
```

```
    private String name = " Savings Account";
```

```
    public void showtotal() {
```

```
        System.out.println("Your Fixed Deposit " + name + " balance is " + totalAmount);
```

```
    }
```

```
}
```

```
public class Acc {
```

```
    public static void main(String[] args) {
```

```
        Bank newBank = new Bank();
```

```
        newBank.showTotal();
```

```
        Bank savingsAc = new SavingsAccount();
```

```
        Bank current = new CurrentAccount();
```

```
        savingsAc.addAmt(1000);
```

```
current.addAmt(20000);
```

```
newBank.addToTotalBankCash(current);
```

```
newBank.addToTotalBankCash(savingsAc);
```

```
current.showTotal();
```

```
savingsAc.showTotal();
```

```
newBank.showTotal();
```

```
}
```

```
}
```

4.

```
package oop4;
```

```
abstract class Animal {  
    String name;  
    abstract String bark();  
}
```

```
class Dog extends Animal{  
    String bark() {  
        return "BOW BOW";  
    }  
}
```

```
class Cat extends Animal{  
    String bark() {  
        return "MEOW MEOW";  
    }  
}
```

```
public class Abs {  
    public static void main(String[] args) {  
        Animal animal=new Dog();  
        // Animal animal=new Cat();  
        System.out.println(animal.bark());  
    }  
}
```

## 5.SHAPES

```
package oop5;

public abstract class Draw
{
    public abstract void draw();
}

class Line Extends Draw
{
    @Override
    public void draw()
    {
        System.out.println("Drawing Line");
    }
}

class rectangle Extends Draw
{
    @Override
    public void draw()
    {
        System.out.println("Drawing rectangle");
    }
}

class cube Extends Draw
{
    @Override
    public void draw()
    {
        System.out.println("Drawing cube");
    }
}

public class Shapes{
    public static void main(String args[]){
        Draw d= new line();
        d.draw();
        Draw d1=new rectangle();
        d1.draw();
        Draw d2=new cube();
        d2.draw();
    }
}
```

## 6.PERSISTENCE

```
package persist;
public class Per_classes
{
}

abstract class persist
{
    abstract void per();
}
```

```

}

class filepersistence extends persist
{
@Override
void per()
{
System.out.println("Executing File Persistence");
}
}

class databasepersistence extends persist
{
@Override
void per()
{
System.out.println("Executing database Persistence");
}
}

public class Persistence
{
public static void main(String args[])
{
persist p=new filepersistence();
p.per();
persist p1=new databasepersistence();
p1.per();
}
}

```
